phosphatase stress-related protein (PHSRP) coding nucleic acid (ABN81330-ABN81334), where expression of the nucleic acid in the plant cell results in increased tolerance to an environmental stress as compared to a wild type variety of the plant cell. PHSRP encoding genes are useful for identifying Physcomitrella patens and related organisms, as markers for specific regions of the genome, mapping of genomes of organisms related to patens, identification and localisation of PHSRP regions related for function, modulation of patens sequences of interest, evolutionary studies, determination of PHSRP regions required for function, modulation of the transmembrane transport of one or more cell functions, modulation of the transmembrane transport of one or more cell functions, modulation of stress resistance. The gene is also useful for identifying and/or cloning PHSRP homologues in other cell types and organisms, for identifying and organisms as being polynucleotide of the invention  Sequence 1365 BP; 337 A; 282 C; 373 G; 373 T; 0 U; 0 Other;	_	1 GGCGTTAACGCGGGGGGGGGGGGGGGGGGGGGGGGGGGG	CONTROL	301 CTTGTTCATGGGCGACTATGTGGATCGTGGATATTATTCTGTCGAGACTGTGTCGCTCTT 360	GATGTTTGGAAGTACTTCAGGATCTGTTGATTGCTGCGAGGAGTTGCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTCTGAGAGCTCTTGATTGA

```
The invention relates to a transgenic plant cell transformed by a Phosphatase Stress-Related Protein (PHSRP) coding nucleic acid. The expression of the nucleic acid in the plant cell results in increased tolerance to an environmental stress (e.g. salt tolerance, cold and drought) as compared to a wild type variety of the plant cell, a seed conduced by the transgenic plant comprising the novel plant cell, a seed produced by the transgenic plant comprising the seed is true breeding for an increased tolerance to environmental stress as compared to a wild type variety of the plant cell, an agricultural product produced by the plant cell, an agricultural product produced a recombinant expression vector comprising the nucleic acid, and producing a transgenic plant containing PHSRP nucleic acid. The transgenic plant cell transformed by a Phosphatase Stress-Related Protein (PHSRP) coding cucleic acid is useful for modifying stress tolerance of a plant. The present sequence encodes the PHSRP, protein phosphatase, PP2A-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in meletronic form from the UB patent office at available in electronic form from the UB patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme compositions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, ingnin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for

                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a protein phosphatase stress-related
polypeptide (PPSRP). The specification describes PPSRP polypeptides
designated PpPP2A-1, PPPP-1, BnPP2A-2, BnPP2A-3, GmPP2A-1,
GmPP2A-2, GmPP2A-3, OSPP2A-1, OSPP2A-1, BnPP2A-2, BnPP2A-3, GmPP2A-1,
GmPP2A-2, GmPP2A-3, OSPP2A-1, OSPP2A-1, BnPP2A-3, derived from
C Physicomitrella patens, Brassica napus, Glycine max or Oryza sativa. PPSRP
C tolerance to an environmental stress such as drought or increased
c alinity and cold. They are also useful in identification and
C salinity and cold. They are also useful in identification and
C salinity and related organisms, mapping of genomes of organisms
c related to the above species, in a evolutionary and polypeptide
c structural studies, in determination of PPSRP regions required for
function, modulation of PPSRP activity, modulation of metabolism of one
c or more cell functions and transmembrane transport of one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GAGGTGAAGAACCTATGTGATCAAGCTCGGACGATCTTGGTGGAGGAGTGGAACGTGCAG 199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polymucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polymucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabiotosis thalians stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         250
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             550
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    71 ATGCCGTCATATGCAGATGTAGACCGGCAGATAGAGCAGCTGTCGGAGTGCAAGCCGTTG 130

VA 192 used: ic 132 ed and lants that A-A 5=5 The invention relates to identifying a stress condition to cell has been exposed, comprising: (a) contacting nucleic a representative of expressed polynucleotides in the plant cell array or probes representative of the plant cell genome; and detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful it production of transgenic plants, cells and seeds and in prowing increased tolerance to abiotic stress. The present sequence of an Arabidopsis thaliana stress regulated gene (ABZ12196.) In methods of the invention. Note: The sequence data for the not respresented in the printed specification but is based on information supplied to Derwent by the European Patent Officential and seeds and second or information supplied to Derwent by the European Patent Officential and seasons. Identifying a stress condition to which a plant cell has ber producing plants with increased tolerance to these abiotic Length 92. rgaaacggaggrgaagargrrgrgrgaggacgcaaagacgarrcrrgrgg CGTGCAGCCCGTGAAGTGTCCTGTCACGGTTTGCGGTGACATCCATGGCC 126 refrchaccestraaristccstraccerciscssisararccacss rcraarcgagcrirrrcgrarcgrggrrcrrcrccrgaracraarrarc TGATTATGTTGATCGAGGGTATTATTCTGTGGAGACAGTCTCACTTTTGG 73 GCCGTCATATGCAGATGTAGACCGGCAGATAGAGCAGCTGTCGGAGTGCA GCCGGCGACCGGAGATATCGATCGTCAGATCGAGCAGCTTATGGAGTGTA 133 GGAGTTGGAGGTGAAGAACCTATGTGATCAAGCTCGGACGATCTTGGTGG TCTCATCGAGCTTTTCCGCATAGGAGGCAAGGCGCCCGACACGAACTACT CGACTATGTGGATCGTGGATATTATTCTGTCGAGACTGTGTCGCTCTTAG Claim 144; SEQ ID NO 571; 577pp + Sequence Listing; English Sequence 924 BP; 246 A; 183 C; 212 G; 283 T; 0 U; 0 Other; Arabidopsis thaliana, plant, gene, stress, transgenic, 39.0%; Score 531.8; DB 6; 73.7%; Pred.        Email: tshini@genes nig.ac.jp
A backbone of the vector is basically from pBluescript II (KS),
that was in vivo excised from a 1-FiC phage vector (Carninci et al.
2001). 5' end of the cDNA that was digested with XhoI was ligated
to Sall site of the vector and the 3' end including polyA tail was
ligated to BamHI site of the
vector(S'- gAgAgAgAgAgArCARCCTGGAGATTTTTTTTTTTTTTTTTTTTTTVN-3' was
vector(S'- aAgAgAgAgAgArCARCCTGGAGATTCGAGACTCGAGACTCGAGATCGGAGATCGGATTCGAGCTGGAGATCGGAGATCGGAGATCGGAGATCGGAGATTCGTCGAGACGGO, cDNA instert could be
amplified with conventional T7 and T3 primers. This full-length
CDNA library was generated according to the method described in
Nishiyama et al. (2003).
Protonemata were blended by the POLYTRON, and then cultivated on
the BCDATG medium for 13- 14 days under the continuous light.
These clones are available from RIKEN Bio Resource Center
(http://www.brc.riken.go.jp/lab/epd/Eng/index.html). The database
of Physcomirrella EST clones is available at the PHYSCObase
(http://moss.nibb.ac.jp).

## November 2005

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases; older published applications make up the Published Applications Main databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions .rnpbm (Published\_Applications\_NA\_Main) and .rnpbm (Published\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions .rapbm (Published Applications AA Main) and .rapbm (Published Applications AA New).

```
The present sequence represents a protein phosphatase stress-related polypeptide (PPSRP). The specification describes PPSRP polypeptides designated PPPP2A-1, PPPP-1, BNPP2A-2, BNPP2A-3, GMPP2A-1, GMPP2A-2, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-1, DPPP-1, BNPP2A-2, GMPP2A-3, GMPP2A-1, DPPP-1, BNPP2A-2, GMPP2A-3, GMPP2A-1, GMPP2A-3, GMPP2A-1, GMPP2A-3, GMPP2A-1, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-1, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP2A-3, GMPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DLIELFRIGGKAPDTNYLFMGDYVDRGYYSVETVSLLVALKVRYRDRITILRGNHESRQI 120

The present sequence represents a protein phosphatase strespolygeptide (PPSRP). The specification describes PPSRP polydesignated PPPRA-1, PPPP-1, BNPP2A-1, BNPP2A-3, GMPP2A-2, GMPP2A-2, GMPP2A-1, OSPP2A-1, OSPP2A-3, derived Physcomircella patens, Brassica napus, Glycine max or Oryza polypeptides and polymucleotides are useful for modulating tolerance to an environmental stress such as drought or inc salinity and cold. They are also useful in identification a localization of Physcomitrella patens, Brassica napus, Glyc Oryza sativa and related organisms, mapping of genomes of c related to the above species, in a evolutionary and polyper structural studies, in determination of PRSR regions requi function, modulation of PPSRP activity, modulation of metab or more cell functions and transmembrane transport of one c Claim 7; Page 75; 107pp; English.

                                                    The invention describes a recombinant DNA construct compris. polymucleotide consisting of a sequence encoding an amino a vailable in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The profit of the invention are also useful in physical arrays of moler plant breeding markers. The recombinant DNA construct is us improving plant tolerance to cold, heat, drought, herbicides osmocic conditions, pathogens or pests, for manipulating graphart cells by modification of the cell cycle pathway, for increased resistence to plant disease, for producing galactincased resistence to plant disease, for producing galacting increased resistence to plant disease, for producing galacting increasing srowth regulators, for increasing the rate of recombination in plants, for improving yield by modification photosynthesis or carbohydrate, nitrogen or phosphorus use or by providing improved plant growth and development under stress condition or for modifying seed oil or protein yield content. This is the amino acid sequence of a plant full lesponyment where the polypeptide that can be used in the recombinant DNA construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein identification; signal transduction pathway; metabobybridisation assay; genetic mapping; gene expression contratermination sequence.

The invention relates a recombinant DNA construct comprising polynacleotide with any of 5544 and clockide sequences (CDI polynacleotide with any of 5544 and incoding a polygeptide with any of 5544 incoding a polygeptide with any of 5544 incoding a polygeptide with any of 5545 incode is sequences is derived from which organism. Also included is producing a plant having an improved property, comprising that plant with a recombinant DNA construct comprising a promote plant with a recombinant DNA construct comprising a promote plant with a recombinant DNA construct comprising a promote plant with a recombinant DNA construct comprising the plant. The property is selected from improving plant cold to plant disease, for galactomannan production, casistance to plant disease, for galactomannan production, resistance to plant disease, for improving plant tolerance to herbicides, for increasing the homologous recombination in plants, for lignin production, comparance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving the photosynthesis, for medifying seed protein yield and/or content, for yield improved to carbohydrate, nitrogen or phosphorus use are and for yield improvement by providing improved plant growt development under at least one stress condition. The polynuc also encode a plant transcription factor. The methods and conditions, in particular for producing transgenic plants with belongered to extreme osmotic and drought conditions, and in the field, increasing plant tolerance to cold or heat, improving tolerance to extreme osmotic and drought conditions, and in the field of biocopherics are and colerance to extreme osmotic and drought conditions, and in the field of marver of molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arrays of molecules, plant breeding markers, computer-based analysis systems. The present sequence is one of the 5544 p sequences of the invention. Note: The sequence data for this not form part of the printed specification, but was obtaine

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
